

## Hygienic

Totally non-porous, easy to clean with warm water and a cloth, stain proof and resistant against acids and solvents.

## Resistant to heat

Resistant to high temperatures, non-flammable and insensitive to UV rays.

## Scratch resistant

Very hard and durable, highly scratch and abrasion resistant.

## Natural

Manufactured respecting the environment and protecting consumers. Free of petroleum-derived products and resins, while including antibacterial properties.

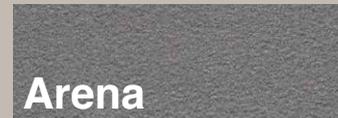

# 7

## seven finishes for a countless amount of applications

### Fossil

A coarser textured surface finish, with a "roughness" similar to the split face or flamed surface of natural stone.

### Arena

Smooth and sand-like finish with a consistent grain that confers a natural dynamism to the entire slab.

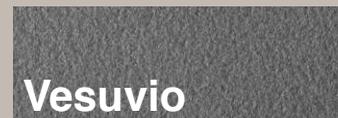

### Lithos

A fine, rough surface, ideal for kitchen worktops, exterior paving of yachts and swimming pools.

### Dune

Recalls the sands of the desert, where wind gently molds the landscape.

### Vesuvio

A fine textured, tactile but smooth surface - similar to a leather finish on a fine grained granite.

### Satin

Soft matte finish with a silky texture and low sheen that is extremely easy to maintain.

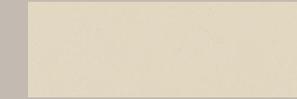

### Lux

A highly reflective polished finish that naturally enhances luminosity.

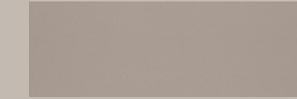

## colour options
